Long-term Pavement Performance Maintenance and Rehabilitation Data Collection Guide Amy L. Simpson 2006

"This document provides guidelines and forms for documenting maintenance and rehabilitation treatments on test sections in the Long-Term Pavement Performance (LTPP) program and is an update to chapters 6 and 7 of the 1993 version of the LTPP Data Collection Guide. The terms maintenance and rehabilitation are used within the LTPP program to classify how various treatments which

alter a test section's structure are documented in the database. This is an important distinction, since classification of some of these treatments may differ from highway agency terminology. For example, thin overlays that some agencies may classify as maintenance are classified within the LTPP program as rehabilitation, since the data forms for overlays of any thickness are the same."--Technical report documentation page.

Clinical Practice Guidelines Carol Schunk 2000 Evaluation and treatment guidelines are parameters for clinical practice. Therapists use guidelines to provide interventions that optimize patient outcomes. Developed by therapists at Therapeutic Associates, Inc. with clinical experience and an understanding of today's health care environment, this user-friendly manual provides a reference to all aspects of patient care, including initial evaluation, goal development, treatment, and discharge planning. Function and patient responsibility are emphasized. The guidelines are organized by orthopaedic and neurological diagnoses commonly encountered in rehabilitation practice. They can be used as a resource in the clinic or to validate treatment to a referral source or third-party payer. Each guideline concludes with an extensive, up-to-date bibliography, and each guideline is paired with a one-page quick reference tool that summarizes the guideline. The terminology in the guidelines is designed to coincide with APTA's Guide to Physical Therapist Practice.
