Kahn, whose many buildings include the Salk Institute, the Yale Study Center, and the Exeter Library. He is remembered, however, not only as a master builder, but also as one of the most important and creative thinkers of the twentieth century. For Kahn, the study of architecture was the study of human beings, their highest aspirations and most profound truths. He searched for forms and materials to express the subtlety and grandeur of life. In his buildings we see the realization of his vision: luminous surfaces that evoke a fundamental awe, silent courtyards that speak of the expansiveness and the sanctity of the spirit, monumental columns and graceful arches that embody dignity and strength. Updated with a new preface, this classic work is a major statement on human creativity, showing us Louis Kahn as architect, visionary, and poet.

Louis Kahn Carter Wiseman 2020-11-10
The man who envisioned and realized such landmark buildings as the Salk Institute, the Kimbell Art Museum, and the National Assembly complex in Bangladesh, Louis Kahn was born in what is now Estonia, immigrated to America, and became one of the towering figures in his adopted country's built world. His works are unmistakable in their elegance, monolithic power, and architectural honesty. Written by Carter Wiseman, one of Kahn's most respected commentators, this book offers a succinct, accessible examination of the life and work of one of America's greatest architects. It traces the influence of his immigrant origins, his upbringing in poverty, his education, the impact of the Great Depression, and the arrival of Modernism on his life and work. Finally, it provides insight into why, as the legacy of many of his contemporaries has receded in

importance, Kahn's has remained so durably influential. Louis Kahn: A Life in Architecture provides the best concise introduction available to this singular life and achievement.

Nationalism and Architecture Darren Deane 2016-12-05 Unlike regionalism in architecture, which has been widely discussed in recent years, nationalism in architecture has not been so well explored and understood. However, the most powerful collective representation of a nation is through its architecture and how that architecture engages the global arena by expressing, defining and sometimes

negating a sense of nation in order to participate in the international world. Bringing together case studies from Europe, North and South America, the Middle East, Africa, Asia and Australia, this book provides a truly global exploration of the relationship between architecture and nationalism, via the themes of regionalism and representation, various national building projects, ethnic and trans-national expression, national identities and histories of nationalist architecture and the philosophies and sociological studies of nationalism. It argues that nationalism needs to be trans-national as a notion to be critically understood and the geographical scope of the proposed volume reflects the continuing relevance of the topic within current architectural scholarship as an overarching notion. The interdisciplinary essays are coherently grouped together in three thematic sections: Revisiting

Nationalism, Interpreting Nationalism and Questioning Nationalism. These chapters, offer vignettes of the protean appearances of nationalism across nations, and offer a basis of developing wider knowledge and critically situated understanding of the question, beyond a singular nation's limited bounds.

Air-Conditioning in Modern American Architecture, 1890-1970 Joseph M. Siry 2021-03-25 Air-Conditioning in Modern American Architecture, 1890-1970, documents how architects made environmental technologies into resources that helped shape their spatial and formal aesthetic. In doing so, it sheds important new light on the ways in which mechanical engineering has been assimilated into the culture of architecture as one facet of its broader modernist project. Tracing the development and architectural integration of air-conditioning from its origins in the late nineteenth century to the advent

of the environmental movement in the early 1970s, Joseph M. Siry shows how the incorporation of mechanical systems into modernism's discourse of functionality profoundly shaped the work of some of the movement's leading architects, such as Dankmar Adler, Louis Sullivan, Frank Lloyd Wright, Ludwig Mies van der Rohe, Gordon Bunshaft, and Louis Kahn. For them, the modernist ideal of functionality was incompletely realized if it did not wholly assimilate heating, cooling, ventilating, and artificial lighting. Bridging the history of technology and the history of architecture, Siry discusses air-conditioning's technical and social history and provides case studies of buildings by the master architects who brought this technology into the conceptual and formal project of modernism. A monumental work by a renowned expert in American modernist architecture, this book asks us to see canonical

modernist buildings through a mechanical engineering-oriented lens. It will be especially valuable to scholars and students of architecture, modernism, the history of technology, and American history. Kahn at Penn James Williamson 2015-03-24 Louis I. Kahn is widely known as an architect of powerful buildings. But although much has been said about his buildings, almost nothing has been written about Kahn as an unconventional teacher and philosopher whose influence on his students was far-reaching. Teaching was vitally important for Kahn, and through his Master's Class at the University of Pennsylvania, he exerted a significant effect on the future course of architectural practice and education. This book is a critical, in-depth study of Kahn's philosophy of education and his unique pedagogy. It is the first extensive and comprehensive investigation of the Kahn Master's

Class as seen through the eyes of his graduate students at Penn.

Louis I. Kahn Louis I. Kahn 1999 Accademia di architettura Mendrisio This publication on the construction of the Kimbell Art Museum by Louis I. Kahn may prove very useful to students, and to anyone interested in gaining further knowledge of the distinctive features of the Kimbell museum. It documents the long and arduous quest that often characterizes a creative process-- even that of a great master such as Louis I. Kahn. The design of the Kimbell Art Museum is the product of extraordinary intuition, and results in a masterly synthesis that solves all the problems posed by the site and the specific purpose of the construction. i Cataloghi dell'Accademia di architettura 2 The series "I Cataloghi" documents the exhibitions, i.e. reviews undertaken by the Academy of Architecture of the architectural works and events of the

20th century. The initial stages are dedicated primarily to a comparison between the principal figures of this century and contemporary emerging architects. This comparison attempts to trace the link that unites the birth and development of a theory to its subsequent concrete application, along the 'winding path' of research. The exhibitions and their accompanying catalogues aim to offer all readers, not only those attending the Academy, a review of architects and architectural works that have enriched and continue to enrich the discipline of building. Louis Kahn John Lobell 2020-06-30 For everyone interested in the enduring appeal of Louis Kahn, this book demonstrates that a close look at how Kahn put his buildings together will reveal a deeply felt philosophy. Louis I. Kahn is one of the most influential and poetic architects of the twentieth century, a figure whose appeal extends beyond the realm of specialists. In this book, noted Kahn expert John Lobell explores how Kahn's focus on structure, respect for materials, clarity of program, and reverence for details come together to manifest an overall philosophy. Kahn's work clearly conveys a kind of "transcendent rootedness"--a rootedness in the fundamentals of architecture that also asks soaring questions about our experience of light and space, and even how we fit into the world. In

Louis Kahn: Architecture as Philosophy, John Lobell seeks to reveal how Kahn's buildings speak to grand humanistic concerns. Through examinations of five of Kahn's great buildings--the Richards Medical Research Building in Philadelphia; the Salk Institute for Biological Studies in La Jolla; the Phillips Exeter Academy Library in New Hampshire; the Kimbell Art Museum in Fort Worth; and the Yale Center for British Art in New Haven--Lobell presents a clear but detailed look at how the way these buildings are put together presents Kahn's philosophy, including how Kahn wishes us to experience them. An architecture book that touches on topics that addresses the universal human interests of consciousness and creativity, Louis Kahn: Architecture as Philosophy helps us understand our place and the nature of well-being in the built environment.

Architectures of Transversality Shima Mohajeri 2018-07-11 Architectures of Transversality investigates the relationship between modernity, space, power, and culture in Iran. Focusing on Paul Klee's Persian-inspired miniature series and Louis Kahn's unbuilt blueprint for a democratic public space in Tehran, it traces the architectonics of the present as a way of moving beyond universalist and nationalist accounts of modernism. Transversality is a form of spatial production and practice that addresses the three important questions of the self, objects, and power. Using Deleuzian and Heideggerian theory, the book introduces the practices of Klee and Kahn as transversal spatial responses to the dialectical tension between

existential and political territories and, in doing so, situates the history of the silent, unrepresented and the unbuilt - constructed from the works of Klee and Kahn - as a possible solution to the crisis of modernity and identity-based politics in Iran.

Louis Kahn Joseph Rykwert 2001-10-01 The publication of this book coincides with the centenary of the birth of American architect Louis Kahn (1901-1974), though its immediate occasion is the new collection of photographs that illustrate the text and provide an opportunity to reconsider Kahn's achievement and his way of working. Architectural historian Joseph Rykwert has written a sensitive appreciation of Kahn's career and oeuvre, and photographer Roberto Schezen traveled the world to photograph fifteen of Kahn's major projects especially for this volume. Supplementing the photographs are

dozens of Kahn's sketches and plans for many of his built and unbuilt designs.

You Say to Brick Wendy Lesser
2017-03-14 Born in Estonia 1901 and brought to America in 1906, the architect Louis Kahn grew up in poverty in Philadelphia. By the time of his mysterious death in 1974, he was widely recognized as one of the greatest architects of his era. Yet this enormous reputation was based on only a handful of masterpieces, all built during the last fifteen years of his life. Wendy Lesser's *You Say to Brick: The Life of Louis Kahn* is a major exploration of the architect's life and work. Kahn, perhaps more than any other twentieth-century American architect, was a "public" architect. Rather than focusing on corporate commissions, he devoted himself to designing research facilities, government centers, museums, libraries, and other structures that would serve the

public good. But this warm, captivating person, beloved by students and admired by colleagues, was also a secretive man hiding under a series of masks. Kahn himself, however, is not the only complex subject that comes vividly to life in these pages. His signature achievements—like the Salk Institute in La Jolla, the National Assembly Building of Bangladesh, and the Indian Institute of Management in Ahmedabad—can at first seem as enigmatic and beguiling as the man who designed them. In attempts to describe these structures, we are often forced to speak in contradictions and paradoxes: structures that seem at once unmistakably modern and ancient; enormous built spaces that offer a sense of intimate containment; designs in which light itself seems tangible, a raw material as tactile as travertine or Kahn's beloved concrete. This is where Lesser's

talents as one of our most original and gifted cultural critics come into play. Interspersed throughout her account of Kahn's life and career are exhilarating "in situ" descriptions of what it feels like to move through his built structures. Drawing on extensive original research, lengthy interviews with his children, his colleagues, and his students, and travel to the far-flung sites of his career-defining buildings, Lesser has written a landmark biography of this elusive genius, revealing the mind behind some of the twentieth century's most celebrated architecture.

Architecture, Culture, and

Spirituality Thomas Barrie 2016-03-09 Architecture has long been understood as a cultural discipline able to articulate the human condition and lift the human spirit, yet the spirituality of architecture is rarely directly addressed in academic scholarship. The seventeen chapters

provide a diverse range of perspectives, grouped according to topical themes: Being in the World; Sacred, Secular, and the Contemporary Condition; Symbolic Engagements; Sacred Landscapes; and Spirituality and the Designed Environment. Even though the authors' approach the subject from a range of disciplines and theoretical positions, all share interests in the need to rediscover, redefine, or reclaim the sacred in everyday experience, scholarly analysis, and design.

The Essential Louis Kahn 2021-04-20

This visual tour of every one of the buildings designed solely by Louis Kahn represents the architect's greatest accomplishments. Exemplifying his vision and principles this book focuses on the more than twenty buildings that were designed solely by Louis Kahn. From his native city of Philadelphia to the heart of Bangladesh, Kahn's architecture reflected his fascination with science, mathematics, history, and nature. Striking new interior and exterior photographs by esteemed architectural photographer Cemal Emden reveal the characteristic features of Kahn's

aesthetic: juxtaposed materials, repetition of line and shape, geometric precision, and archetypical rhythms. Also evident in the images is the way Kahn's designs flourish in a variety of settings--religious, governmental, educational, and residential. The book gives close attention to Kahn's most iconic buildings, including the Richards Medical Research Laboratories at the University of Pennsylvania in Philadelphia; Erdman Hall at Bryn Mawr College in Pennsylvania; the Indian Institute of Management in Ahmedabad, India; the Capitol Complex in Dhaka, Bangladesh; and the Yale Center for British Art in New Haven, Connecticut, as well as a cluster of residences he designed in the Philadelphia area. An essay by architecture professor Caroline Maniaque and a selection of Kahn's most insightful statements complete this book, which allows for a rich understanding of Kahn's architectural

The Living Tradition of Architecture

José de Paiva 2016-12-08 The Living Tradition of Architecture explores the depth of architecture as it takes flesh in the living tradition of building, dwelling and thinking. This is a timely appraisal of the field by some of its foremost contributors. Beyond modern misconceptions about tradition only relating to things past and conducive to a historicist vision, the essays in this volume reveal tradition as a living continuity and common ground of reference for architecture. This collection of essays brings together world-leading scholars, practicing architects and educators, Alberto Pérez-Gómez, Christian Frost, Dagmar Weston, Daniel Libeskind, David Leatherbarrow, Eric Parry, Gabriele Bryant, Joseph Rykwert, Karsten Harries, Kenneth Frampton, Mari Hvattum, Patrick Lynch, Robin Middleton, Stephen Witherford, and

Werner Oechslin, in a single celebratory publication edited by José de Paiva and dedicated to Dalibor Vesely. This book provides a unique initiative reflecting the group's understanding of the contemporary situation, revealing an ongoing debate of central relevance to architecture.

Louis I. Kahn Carter Wiseman 2007 A biographical portrait of Louis I. Kahn reassesses the role of the acclaimed architect in transforming twentieth-century architecture by translating a reverence for history and historical forms into a uniquely contemporary idiom and looks at Kahn's rise to the pinnacle of international architecture, his personal relationships with his clients, and his turbulent romantic life.

Tradition as Mediation: Louis I. Kahn

Dana Margalith 2018-07-11 This book explores Louis I. Kahn's approach to tradition as revealed in two of his

important, unbuilt, projects. Focusing on Kahn's designs for the Dominican Motherhouse of St. Catherine de Ricci, Media, Pennsylvania (1965-1969), and the Hurva Synagogue, Jerusalem, Israel (1967-1974), the book challenges prevailing aesthetic and methodological assessments of Kahn's use of tradition. It reveals how an authentic and critical theoretical-historical and humanistic study of tradition nourished Kahn's designs, enabling him to mediate historical rituals, ideas and beliefs - and to develop innovative designs rooted deep in human culture while addressing real modern concerns. The book evaluates Kahn's works as a creative recreation and re-interpretation of the past, shedding light on the potential value of the meaningful consideration of tradition in modern times.

The book is aimed at design practitioners and students interested in examining their own thinking styles as well as those involved in design cognition research.

Unlearning Architecture Cengiz Yetken
2021-02-25 About the Book Louis I. Kahn (1901-1974) was one of the most prolific architects of the twentieth century. He taught architecture at Yale University and the University of Pennsylvania. He designed and built public and institutional projects in

the United States and abroad. His buildings are treasured by architects, educators, and the public, and have received accolades, national and international recognition, and awards in architecture. Book Description The book traces Kahn's approach to architectural design through his poetic phrases uttered in class, and it examines these as guidelines to establish a basic road map for architecture. Accompanied by concept sketches and photographs that describe Kahn's buildings in a personal light, Yetken walks us through buildings and recalls anecdotes, comments, and stories from Kahn's class and office. The approach to the subject matter is new. It is a fresh look at Louis Kahn. It doesn't repeat things that have already been written or said. It conveys the dynamism of Kahn in academic and professional practice environments. This book offers a brand-new context

for understanding Kahn's philosophical views, deciphering his poetic musings as they relate to the actual design processes that took place in his class and in his office, in particular, based on the personal involvement of the author with the particular project. This is also an immigrant story—the coming-of-age of a young architect, from modest beginnings in his native Turkey, to a transformative intellectual and professional journey in America, and above all, to a successful career inspired by someone with greatness. Contribution and Readership The book is different from comparable architectural books. It is written in nonacademic, readable, and easily understandable language. It is the only book on the subject that describes how Kahn guided his students and his staff. It explains how he structured his approach, how he described architecture to his students and his coworkers in his

office, and how he envisioned the role architects should play in society. The book will be helpful and appealing to a broad potential readership, such as students of architecture, art, and design; teachers of these disciplines; scholars of Louis Kahn and American architecture in general; practicing architects; and anyone interested in the creative design process.

Elements of Architecture Mikkel Bille
2016-02-26 *Elements of Architecture* explores new ways of engaging architecture in archaeology. It conceives of architecture both as the physical evidence of past societies and as existing beyond the physical environment, considering how people in the past have not just dwelled in buildings but have existed within them. The book engages with the meeting point between these two perspectives. For although archaeologists must deal with the presence and absence of physicality

as a discipline, which studies humans through things, to understand humans they must also address the performances, as well as temporal and affective impacts, of these material remains. The contributions in this volume investigate the way time, performance and movement, both physically and emotionally, are central aspects of understanding architectural assemblages. It is a book about the constellations of people, places and things that emerge and dissolve as affective, mobile, performative and temporal engagements. This volume juxtaposes archaeological research with perspectives from anthropology, architecture, cultural geography and philosophy in order to explore the kaleidoscopic intersections of elements coming together in architecture. Documenting the ephemeral, relational, and emotional meeting points with a category of material objects that have defined

much research into what it means to be human, *Elements of Architecture* elucidates and expands upon a crucial body of evidence which allows us to explore the lives and interactions of past societies.

Our Days Are Like Full Years Harriet Pattison 2020-10-27 An intimate glimpse into the professional and romantic relationship between Harriet Pattison and the renowned architect Louis Kahn On a winter day in 1953, a mysterious man in a sheepskin coat stood out to Harriet Pattison, then a theater student at Yale. She would later learn he was the architect Louis Kahn (1901-1974). This chance encounter served as preamble to a fifteen-year romance, with Pattison becoming the architect's closest confidante, his intellectual partner, and the mother of his only son. Here for the first time, Pattison recounts their passionate and sometimes searing relationship. Married and twenty-seven years her senior, Kahn

sent her scores of letters—many from far-flung places—until his untimely death. This book weaves together Pattison's own story with letters, postcards, telegrams, drawings, and photographs that reveal Kahn's inner life and his architectural thought process, including new insight into some of his greatest works, both built and unbuilt. What emerges is at once a poignant love story and a vivid portrait of a young woman striving to raise a family while forging an artistic path in the shadow of her famous partner.

Constructing Building Enclosures

Clifton Fordham 2020-07-21

Constructing Building Enclosures investigates and interrogates tensions that arose between the disciplines of architecture and engineering as they wrestled with technology and building cultures that evolved to deliver structures in the modern era. At the center of this history are inventive architects,

engineers and projects that did not settle for conventional solutions, technologies and methods. Comprised of thirteen original essays by interdisciplinary scholars, this collection offers a critical look at the development and the purpose of building technology within a design framework. Through two distinct sections, the contributions first challenge notions of the boundaries between architecture, engineering and construction. The authors then investigate twentieth-century building projects, exploring technological and aesthetic boundaries of postwar modernism and uncovering lessons relevant to enclosure design that are typically overlooked. Projects include Louis Kahn's Weiss House, Minoru Yamasaki's Science Center, Sigurd Lewerentz's Chapel of Hope and more. An important read for students, educators and researchers within architectural history, construction history,

building technology and design, this volume sets out to disrupt common assumptions of how we understand this history.

Ian McHarg and the Search for Ideal Order Kathleen John-Alder 2019-09-17 Ian McHarg and the Search for Ideal Order looks at the well-known and studied landscape architect, Ian McHarg, in a new light. The author explores McHarg's formative years, and investigates how his ideas

developed in both their complexity and scale. As a precursor to McHarg's approach in his influential book *Design with Nature*, this book offers new interpretations into his search for environmental order and outlines how his struggle to understand humanity's relationship to the environment in an era of rapid social and technological change reflects an ongoing challenge that landscape design has yet to fully resolve. This book will be of great interest to academics and researchers in landscape architectural history.

Utopias and Architecture Nathaniel Coleman 2007-05-07 Utopian thought, though commonly characterized as projecting a future without a past, depends on golden models for re-invention of what is. Through a detailed and innovative re-assessment of the work of three architects who sought to represent a utopian content in their work, and a consideration of the thoughts of a range of leading

writers, Coleman offers the reader a unique perspective of idealism in architectural design. With unparalleled depth and focus of vision on the work of Le Corbusier, Louis I Kahn and Aldo van Eyck, this book persuasively challenges predominant assumptions in current architectural discourse, forging a new approach to the invention of welcoming built environments and transcending the limitations of both the postmodern and hyper-modern stance and orthodox modernist architecture.

Modern Architecture and Religious Communities, 1850–1970 Kate Jordan
2018-04-17 Social groups formed around shared religious beliefs encountered significant change and challenges between the 1860s and the 1970s. This book is the first collection of essays of its kind to take a broad, thematically-driven case study approach to this genre of architecture and its associated

visual culture and communal experience. Examples range from Nuns' holy spaces celebrating the life of St Theresa of Lisieux to utopian American desert communities and their reliance on the philosophy of Teilhard de Chardin. Modern religious architecture converses with a broad spectrum of social, anthropological, cultural and theological discourses and the authors engage with them rigorously and innovatively. As such, new readings of sacred spaces offer new angles and perspectives on some of the dominant narratives of the nineteenth, twentieth and twenty-first centuries: empire, urban expansion, pluralism and modernity. In a post-traditional landscape, religious architecture suggests expansive ways of exploring themes including nostalgia and revivalism; engineering and technological innovation; prayer and spiritual experimentation; and the beauty of holiness for a brave new world.

Shaped by the tensions and anxieties of the modern era and powerfully expressed in the space and material culture of faith, the architecture presented here creates a set of new turning points in the history of the built environment.

The Architecture of Ruins Jonathan Hill 2019-03-25 The Architecture of Ruins: Designs on the Past, Present and Future identifies an alternative and significant history of architecture from the sixteenth century to the twenty-first century, in which a building is designed, occupied and imagined as a ruin. This design practice conceives a monument and a ruin as creative, interdependent and simultaneous themes within a single building dialectic, addressing temporal and environmental questions in poetic, psychological and practical terms, and stimulating questions of personal and national identity, nature and culture, weather and climate,

permanence and impermanence and life and death. Conceiving a building as a dialogue between a monument and a ruin intensifies the already blurred relations between the unfinished and the ruined and envisages the past, the present and the future in a single architecture. Structured around a collection of biographies, this book conceives a monument and a ruin as metaphors for a life and means to negotiate between a self and a society. Emphasising the interconnections between designers and the particular ways in which later architects learned from earlier ones, the chapters investigate an evolving, interdisciplinary design practice to show the relevance of historical understanding to design. Like a history, a design is a reinterpretation of the past that is meaningful to the present. Equally, a design is equivalent to a fiction, convincing users to suspend disbelief. We expect a history or a

novel to be written in words, but they can also be delineated in drawing, cast in concrete or seeded in soil. The architect is a 'physical novelist' as well as a 'physical historian'. Like building sites, ruins are full of potential. In revealing not only what is lost, but also what is incomplete, a ruin suggests the future as well as the past. As a stimulus to the imagination, a ruin's incomplete and broken forms expand architecture's allegorical and metaphorical capacity, indicating that a building can remain unfinished, literally and in the imagination, focusing attention on the creativity of users as well as architects. Emphasising the symbiotic relations between nature and culture, a building designed, occupied and imagined as a ruin acknowledges the coproduction of multiple authors, whether human, non-human or atmospheric, and is an appropriate model for architecture in

an era of increasing climate change. While much of his built work has been heavily studied, this publication chooses instead to focus on Kahn's prolific arsenal of drawings and plans, some of which were never realized. volume is an essential addition to the library of established designers as well as students of architecture. Louis Kahn (1901-74) was an Estonian-born American architect who worked in Philadelphia for the majority of his life. Inspired early in his career by European medievalism and later the ruins of much older civilizations, Kahn was notable for his ability to meld the modernist tendencies of his time with the classical poise of ancient monuments. Some of his major designs include the National Parliament House in Dhaka, Bangladesh and the Salk Institute for Biological Studies in La Jolla, California. Some of Kahn's unrealized projects, such as the Four Freedoms Park on Roosevelt Island, have since been constructed posthumously. Kahn taught at Yale School of Architecture from 1947 to 1957 and then at the University of Pennsylvania until his death.

More than sixty years after the Metabolist manifesto was published, the author's original contributions highlight the persistent links between present and past that can help to re-imagine new urban futures as well as the design of innovative intra-urban relationships and spaces. The essays are written by experienced scholars and renowned academics from Japan, Australia, Europe, South Korea and the United States and expose

Metabolism's special merits in promoting new urban models and evaluate the current legacy of its architectural projects and urban design lessons. They offer a critical, intellectual, and up-to-date account of the Metabolism projects and ideas with regard to the current evolution of architectural

and urbanism discourse in a global context. The collection of cross-disciplinary contributions in this volume will be of great interest to architects, architectural and urban historians, as well as academics, scholars and students in built environment disciplines and Japanese cultural studies.
