If we are true to our faith, whatever that faith is, the most important thing is to listen to God, to His revealed message for us personally. God speaks to each of us personally, uniquely, speaking to our own needs. These essays are intended to help open your mind to the possibility of asking questions, not about the veracity of the revealed Word of the Scriptures, but about how we see our relationship with God and how we find our way home. I hope you will find this a useful tool in your own attempt at finding your path.

Prognostics Kai Goebel 2017-04-03 Prognostics is the science of making predictions of engineering systems. It is part of a suite of techniques that determine whether a system is behaving within nominal operational performance and - if it does not - that determine what is wrong and how long it will take until the system no longer fulfills certain functional requirements. This book presents the latest developments and research findings on the topic of prognostics by the Prognostics Center of Excellence at NASA Ames Research Center. The book is intended to provide a practitioner with an understanding of the foundational concepts as well as practical tools to perform prognostics and health management on different types of engineering systems and in particular to predict remaining useful life.

"If Each Comes Halfway"

Kathryn S. March 2018-08-06
For twenty-five years, Kathryn S. March has collected the life stories of the women of a Buddhist Tamang farming community in Nepal. In "If Each Comes Halfway", she shows the process by which she and Tamang women reached across their cultural differences to find common ground. March allows the women's own words to paint a vivid portrait of their highland home. Because Tamang women frequently told their stories by singing poetic songs in the middle of their conversations with March, each book includes a CD of traditional songs not recorded elsewhere. Striking photographs of the Tamang people accent the book's written accounts and the CD's musical examples. In conversation and song, the Tamang open their sem—their "hearts-and-minds"—as they address a broad range of topics: life in extended households, women's property issues, wage employment and out-migration, sexism, and troubled relations with other

ethnic groups. Young women reflect on uncertainties. Middle-aged women discuss obligations. Older women speak poignantly, and bluntly, about weariness and waiting to die. The goal of March's approach to ethnography is to place Tamang women in control of how their stories are told and allow an unusually intimate glimpse into their world.

Kohonen Maps E. Oja
1999-07-02 The Self-Organizing Map, or Kohonen Map, is one of the most widely used neural network algorithms, with thousands of applications covered in the literature. It was one of the strong underlying factors in the popularity of neural networks starting in the early 80's. Currently this method has been included in a large number of commercial and public domain software packages. In this book, top experts on the SOM method take a look at the state of the art and the future of this computing paradigm. The 30 chapters of this book cover the current status of SOM theory, such as connections of SOM to clustering, classification, probabilistic models, and energy functions. Many applications of the SOM are given, with data mining and exploratory data analysis the central topic, applied to large

databases of financial data, medical data, free-form text documents, digital images, speech, and process measurements. Biological models related to the SOM are also discussed.
